**Remote Management via Network**

PLANET Switched IP Power Manager consolidates power control, current monitoring, temperature and humidity monitoring with environmental sensor box (ESB), web page management, message, e-mail, and SNMP functions together to enable MIS staff to be informed and thereby to remotely deal with the relevant problems through Internet.

**Environmental Sensor Box (ESB)**

The IPM-4220 is equipped with a console port for connecting an environmental sensor box (ESB). You may add temperature and humidity sensors to control the power switch by monitoring the environmental changes. When the temperature and humidity reach a high level, you will be notified via SMS and e-mail.
